This is a sample schedule showing preface or beginning text.

Standard letters / paragraphs etc may be setup using Microsoft Word and can be pasted into the pre amble letter, or the notes at the end of the document.

Schedules may be transferred from one computer system to another, with all relevant 'specials' being transferred automatically.

An option is available for you to supply your customers with the software free of charge, you can then email your schedules directly to them and all internal references will remain hidden, and your header and footer (that are printed on the paperwork) will always remain attached to the schedule. Even if your schedule is forwarded to another company your header will remain with it. Every effort is made to ensure that your schedules remain your property at all times.

Bellingham - 4 Bedroom Detached House with 2 ensuite bathrooms

Set Ref	Set Text	Qty	Sell Price	Line Total

Unlock and open the door to an economical Door Scheduling solution

Notes:

Any number of text lines may be entered to be printed at the end of the document.

For example you may wish to include notes regarding VAT(tax), deliveries, kick plate sizes etc.

The schedule reports can be printed with or without prices, to enable you to produce the correct paperwork for the relevant client. For example you may wish to send an un-priced schedule to the Architect, and then print a cost summary only to use as a working document to price the job, and then send several priced copies to various contractors.

Schedules can be printed with long or short descriptions, with either 'external' product codes and descriptions (ie your hidden information), or with all internal references for your own paperwork requirements.

Product data can be imported from an external system to avoid re-keying data, and optional export options are available to send the product summary automatically into your existing sales order processing (if your systems allows data to be imported) reducing the risk of operator keying errors.

This sample schedule is for demonstration purposes only and the data contained in the document is purely fictitious and may not represent current products or prices.
